Dear Sir,

I am writing concerning your upcoming rule making process concerning the Cape Wind power generation project in Nantucket Sound.

In your rule making, I would ask you to QUICKLY resolve any remaining issues the Corps of Engineers did not resolved in their multi-year study and public hearings. The Cape Wind project has clearly demonstrated the following POSITIVE attributes:

- Eliminate Imported Oil for $\frac{3}{4}$ of the electricity usage on Cape Cod.
- Improve the air quality of Cape Cod – the Cape Cod National Seashore has been deemed one of the worst air polluted National Parks in the United States
- Improve the health of the population of Cape Cod. Harvard medical personnel have determined that at least a dozen people will escape premature death by the air quality improvements because of Cape Wind farms reduction in air pollutants.
- Lower the cost of electricity on Cape Cod in an era of escalating fuel costs.

There is only ONE NEGATIVE attribute:

- NIMBY - On a clear day the project appears as pencil high sticks on the horizon!

Sincerely,

A handwritten signature in cursive script that reads "Richard M. Wolf".
